OCS Group

Products used: ABS URIZAP

Cost effective and environmentally friendly option gets results

OCS Group is an international facilities management group whose core values – Care, Safety, Trustworthy & Expert – are ingrained in their DNA. It is also a Group renowned for introducing effective innovations into the market, as reflected in the Institute of Workplace and Facilities Management (IWFM) Award in 2019

for “Innovation in Product and/or Processes” category.

Subsequent to a November 2019 trial for their end-user customer at Birmingham International Airport using ABS URIZAP, Yvonne Taylor (OCS Head of Cleaning UK, Ireland and Middle East) made this comment on her experience.

“We at OCS are not only keen to resolve issues around the efficient working and user-friendly environment of client urinals, we are also keen to continually find better environmental solutions to achieve this. OCS Group have a reputation that shows we implement innovative solutions that continually reduce our impact on the environment and thus help our customers achieve those sustainability goals too. I was delighted with the outcome of our trial with ABS with the urinals at Birmingham International Airport. I am, as a result, looking forward to working with them across the board to implement their cost effective and environmentally friendly solution to resolving urinal problems by the removal of unnecessary blockages and anti-social smell”
