

FEATURES

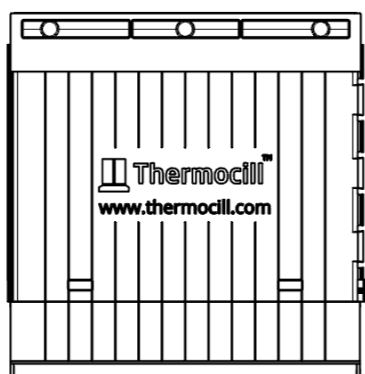

Thermocill™ is an innovative window board that creates a wall of warm air in front of windows located above radiators.

The product directs the air from your radiators to the glazing, reducing both the amount of cold air entering and the amount of warm air leaking out via the windows. The process reduces condensation and moisture on windows, leading to less damp in the home.

Versatile and easy to install, Thermocill™ can be retrofitted or used in new builds, as well as listed properties.

PRODUCT SPECIFICATION

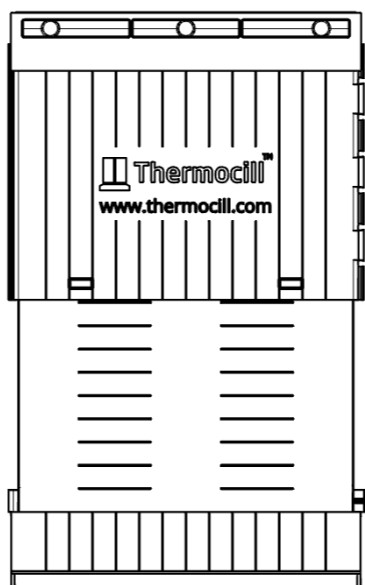

Product Details

Material	Recycled Nylon
Weight	190g

Dimensions (Standard)

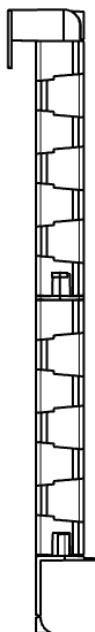

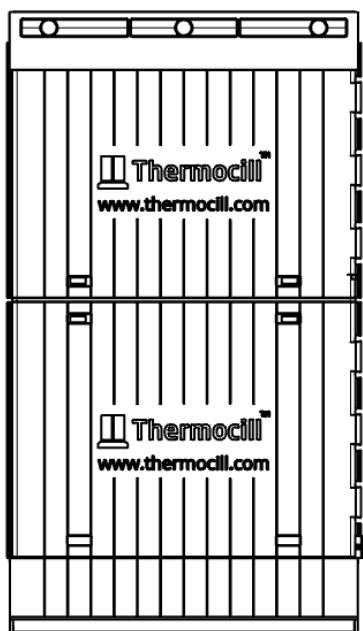

Height	38mm
Width	152mm
Depth	157mm

Dimensions (Standard Extended)

Height	49mm
Width	152mm
Depth	248mm

PRODUCT SPECIFICATION

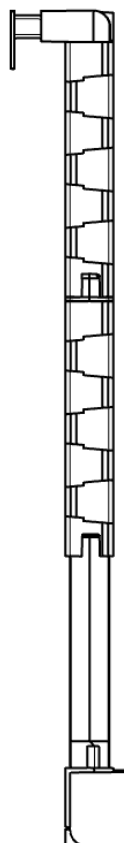

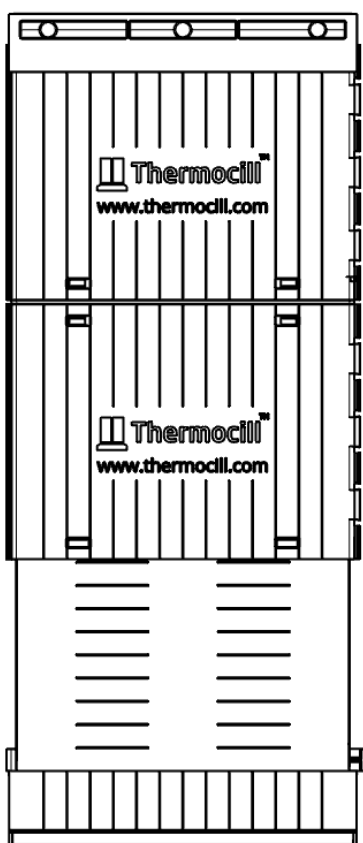

Product Details

Material	Recycled Nylon
Weight	274g

Dimensions (Double)

Height	38mm
Width	152mm
Depth	269mm

Dimensions (Double Extended)

Height	49mm
Width	152mm
Depth	360mm
