## MULTIPLEX

Built to outperform.

**"Hoardfast is a great product that helps us to get set up on site quickly and efficiently throughout the project phases, the service is second to none and we always have a personal contact within Westgate to help support our requirements for the project".**

Having previously worked with Westgate Global to provide site offices and welfare facilities, Multiplex reached out to us again. During the initial phases of the Marble Arch Place project, Multiplex had established off-site offices and welfare facilities, but as the project progressed to the slab-to-slab construction phase, there was a need to **relocate site offices and welfare facilities into the building itself** including a canteen and break area, separate male and female toilets, offices, meeting rooms and a prayer room.

Multiplex required a temporary hoarding system that could achieve a 1-hour fire rating, offer **weatherproofing and insulation properties** and be installed, relocated and reconfigured to suit additional project phases, plus to **minimise waste on-site and reduce the environmental impact** of this construction project it was also important that the hoarding could be diverted from landfill and recycled at the end of the project.
